McClintock High School

The Unification of Physics, 2003
charcoal and chalk pastels
22 x 30 inches

An existence in space-time, forces strong and weak, has rendered a system quite chaotic. Entropy is relative, all dimensions affected. Electromagnetic fields govern life similar to gravity. Manipulation of the double helix and genome defined science as a revolution of discovery. Observing particles and waves, we split the atom, and eventually attained other feats unfathomed. A quantum of light enlightens energy and mass, which illuminates our galaxy and universe. On the event horizon, a moment in time will stretch infinitely and create new life.
